(a) Lean check outcome -> verdict of its pair (1,118 mandatory checks, 286 pairs; width = checks)

Outcomes that never occur here: unsupported, not applicable.
Not drawn: 234 optional or flagged-inapplicable checks (they never affect the verdict).

(b) Branch of `verdict` (Checker.lean) -> Lean verdict (572 pair evaluations; width = pairs)

```
verdict cfg e :=
  if not e.confirmed            -> NEED INFO
  elif fail in outcomes         -> NOT MET
  elif all pass/N/A, >=1 pass   -> MET
  else                          -> NEED INFO
```
